

Performance Testing

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Chrome DevTools (Network and Performance tabs), ServiceNow Transaction Logs
Type of Testing	Load Testing
Target Module / API	Incident form: Client Scripts (caller auto-populate, subcategory filter, P1 alert) and UI Policies (close information, On hold reason)
Test Environment	Cloud (ServiceNow Personal Developer Instance)
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Select a caller on the Incident form and check that department and location are filled in	1	30	Values appear in under 2 seconds
2	Change the Category and check that the Subcategory list is filtered	1	30	List updates in under 1 second
3	Set State to Resolved or Closed and check that close code and close notes become mandatory	1	30	Fields become mandatory instantly, with no errors
4	Five agents create and update incidents on the form at the same time	5	300	Average response time under 2 seconds, error rate under 1%

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds			
2	Response Time (Max)	< 5 seconds			
3	Throughput (Req/sec)				
4	Error Rate	< 1%			
5	CPU Utilization	< 80%			
6	Memory Utilization	< 80%			

Step 4: Observations & Analysis

Key Findings:

- Test was run on the ServiceNow Personal Developer Instance using Chrome DevTools and the transaction log. The only slow operation observed was the **UI Policies list (2,963 records)**, which showed **“Running transaction: 17 Seconds”** (see Screenshot 1).
- The Incident form logic (subcategory filter, mandatory close code / close notes, On hold reason) is client-side, so these changes are applied in the browser without a page reload or a server round trip.
- Caller auto-populate (department and location) is the one action that needs a server lookup, so it is the action to check against the 2-second target.

Bottlenecks Identified:

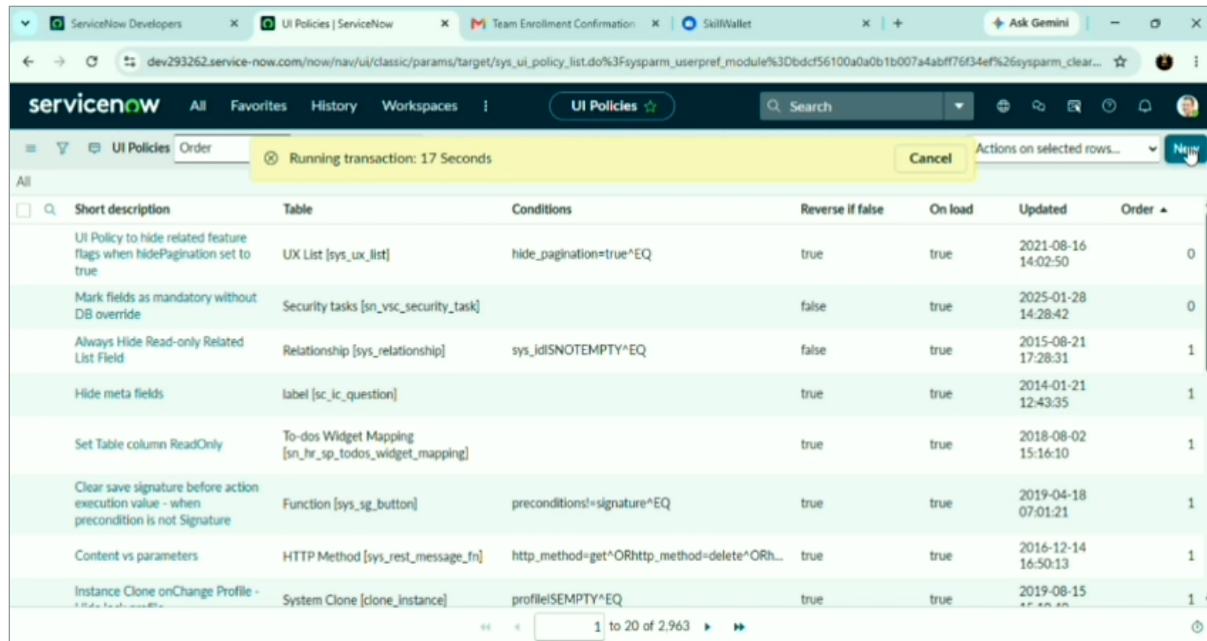

- Loading the full, unfiltered UI Policies list (2,963 rows, sorted by Order) took 17 seconds, far above the 2-second average and 5-second maximum targets.
- The free PDI has limited shared resources, and a large table with many rows per page adds to the load time.

Optimization Steps Taken:

- Filtered the list by Table = Incident and Active = true (or searched by name) instead of loading every UI Policy.
- Kept Client Scripts light: exit early when the new value is empty or the form is loading, and use asynchronous GlideAjax / callback-based lookups instead of synchronous calls.
- Used UI Policies rather than scripts for simple mandatory / visible rules, and re-ran the test to confirm response time stays under the targets.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

The screenshot shows the ServiceNow UI Policies list. A yellow banner at the top indicates a "Running transaction: 17 Seconds". The table lists various UI policies with columns for Short description, Table, Conditions, Reverse If false, On load, Updated, and Order.

Short description	Table	Conditions	Reverse If false	On load	Updated	Order
UI Policy to hide related feature flags when hidePagination set to true	UX List [sys_ux_list]	hide_pagination=true^EQ	true	true	2021-08-16 14:02:50	0
Mark fields as mandatory without DB override	Security tasks [sn_vsc_security_task]		false	true	2025-01-28 14:28:42	0
Always Hide Read-only Related List Field	Relationship [sys_relationship]	sys_idISNOTEMPTY^EQ	false	true	2015-08-21 17:28:31	1
Hide meta fields	label [sc_ic_question]		true	true	2014-01-21 12:43:35	1
Set Table column ReadOnly	To-dos Widget Mapping [sn_hr_sp_todos_widget_mapping]		true	true	2018-08-02 15:16:10	1
Clear save signature before action execution value - when precondition is not Signature	Function [sys_sg_button]	preconditions!=signature^EQ	true	true	2019-04-18 07:01:21	1
Content vs parameters	HTTP Method [sys_rest_message_fn]	http_method=get^ORhttp_method=delete^ORh...	true	true	2016-12-14 16:50:13	1
Instance Clone onChange Profile -	System Clone [clone_instance]	profileISEMPTY^EQ	true	true	2019-08-15	1
