

Customer Journey Map

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Opens a new Incident form - Selects the caller and enters details - Chooses category and subcategory	- Updates the State as work moves on - Puts the incident On Hold when waiting - Adds work notes	- Sets the State to Resolved - Enters close code and close notes - Saves and closes the incident
Touchpoint <i>What part of the service do they interact with?</i>	- Caller field - Category and Subcategory fields - Priority field	- State field - On hold reason field - Work notes	- Close code and Close notes - State: Resolved / Closed - Update button
Customer Thought <i>What is the customer thinking?</i>	"Do I have to type the department and location again?" "Which subcategory fits this category?" "Is this a critical incident?"	"Which fields do I need to fill for this state?" "Why is this field showing now?" "I must record why I paused this."	"Did I forget the close notes?" "Will this be reopened?" "Can I close this quickly?"
Customer Feeling <i>What is the customer feeling?</i>	Frustrated by repeated typing and unsure about the right subcategory.	Confused by fields that do not matter, and worried about missing something.	Anxious about a reopened incident, and relieved when the form confirms everything is complete.
Process Ownership <i>Who is in the lead on this?</i>	Service Desk Agent logs the incident. ServiceNow Developer maintains the Client Scripts.	Service Desk Agent updates the incident. ServiceNow Developer maintains the UI Policies.	Service Desk Agent closes the incident. Incident Manager reviews closure quality.

Opportunities <i>How can we improve this stage?</i>	• Auto-populate caller department and location • Filter subcategory by category • Show an alert for Critical (P1) priority	• Show On hold reason only when State is On Hold • Make On hold reason mandatory • Hide fields that are not needed	• Make close code and close notes mandatory • Show a clear message for missing fields • Report on incidents closed without notes
