

Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "Why do I have to type the caller's department and location every time?" • "The form shows fields I don't need right now." • "I forgot the close notes and the incident got reopened."	THINKS • The incident form should guide me to enter correct and complete data. • A wrong category and subcategory combination wastes everyone's time. • A Critical (P1) incident must get attention immediately.
DOES • Manually fills in caller details, location and department on every incident. • Selects category and subcategory, sometimes choosing a mismatched pair. • Skips close notes or the on hold reason when in a hurry.	FEELS • Frustrated by repetitive manual data entry. • Anxious about missing important details on high priority incidents. • Confident and relieved when the form guides them automatically.
