

Phase 6 – Project Testing Phase

1. Testing Overview

In this phase, the developed UI Policies and Client Scripts are tested to verify that all Incident Management requirements work correctly.

The testing focuses on:

- Mandatory field enforcement
- Automatic Urgency update
- Read-only field behavior
- Save validation
- Reverse condition
- List editing restriction
- Normal form-based updates

2. Test Case 1 – High Impact Control

Test: Set Impact to High.

Expected Result:

- Assigned To becomes mandatory.
- Urgency becomes read-only.
- Urgency is automatically set to High.

Status: Pass

3. Test Case 2 – Urgency Auto Update

Test: Change the Impact field from another value to High.

Expected Result:

The onChange Client Script automatically sets:

Urgency → High

An information message is displayed.

Status: Pass

4. Test Case 3 – Assigned To Validation

Test:

1. Set Impact to High.
2. Leave Assigned To empty.
3. Click Submit.

Expected Result:

The Incident should not be saved and an error message should appear:

→ Assigned To is mandatory for High impact incidents.

Status: Pass

5. Test Case 4 – Successful Save

Test:

1. Set Impact to High.
2. Select a user in Assigned To.
3. Click Submit.

Expected Result:

The Incident should be saved successfully without an error.

Status: Pass

6. Test Case 5 – Reverse Condition

Test:

1. Open an Incident where Impact is High.
2. Change Impact from High to Medium.

Expected Result:

- Assigned To should no longer be mandatory because of the UI Policy.
- Urgency should become editable again.
- The Incident should save normally.

Status: Pass

7. Test Case 6 – List Edit Blocking

Test:

1. Open Incident → All.
2. Try to directly edit the State field.
3. Save the list change.

Expected Result:

An alert should appear:

→ State cannot be updated using list editing. Please open the Incident.

The State change should be cancelled.

Status: Pass

8. Test Case 7 – Form-Based State Update

Test:

1. Open an Incident record.
2. Change State from the Incident form.
3. Click Update.

Expected Result:

The State change should be saved successfully.

Status: Pass

9. Test Case Summary

Test Case	Test Condition	Expected Result	Status
TC01	Impact = High	Assigned To mandatory	Pass
TC02	Impact = High	Urgency automatically High	Pass
TC03	Assigned To empty	Save prevented	Pass
TC04	Assigned To filled	Record saved	Pass
TC05	Impact High → Medium	Restrictions reversed	Pass
TC06	State list edit	Change blocked	Pass
TC07	State form edit	Change allowed	Pass

10. Testing Conclusion

The testing confirms that the configured UI Policies and Client Scripts perform the required Incident form controls. High Impact incidents are properly validated, Urgency is automatically controlled, incomplete records are prevented from being saved, and unauthorized State changes through list editing are blocked.
