

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement client script & UI Policy(Incident)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Client Scripts and UI Policies run only in the browser form	Rules are not enforced for imports, integrations or background updates	High
2	Only the Incident table is covered	Other tables such as Problem, Change and Catalog items do not get the same guidance	Medium
3	Field values and choice values are fixed in the scripts	Changes in choice values need a script update	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Used by a small team on a Personal Developer Instance	Deploy the Update Set to a production instance; the platform handles many concurrent users
2	Data Storage	Small number of test incident records	Use the production database with archive and retention rules for old incidents
3	Performance	Light client-side rules; no server calls in the scripts	Keep rules in UI Policies where possible and avoid GlideRecord calls in Client Scripts
4	Security	Rules apply through the form for users with access	Add server-side Data Policies, Business Rules and role-based ACLs so rules apply everywhere

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Incident form UI Policies and Client Scripts (completed)	Completed	Better data quality on incidents
Phase 2	Add Data Policies and Business Rules for the same rules on the server side	1 to 2 months	Rules apply to integrations and imports
Phase 3	Extend to Problem and Change forms and Service Catalog items	3 to 4 months	Same guided experience across ITSM
Phase 4	Support Service Portal and mobile; add quality dashboards	5 to 6 months	Measurable improvement in ticket quality
