

Problem-Solution Fit

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Service Desk Agents (ITIL users) who log, update and close incidents in ServiceNow.	6. CUSTOMER LIMITATIONS [CL] EG. BUDGET, DEVICES - Little time per incident - Must use the standard Incident form - No extra tools or budget	5. AVAILABLE SOLUTIONS [AS] PROS & CONS - Manual entry: no setup, but slow and error-prone - Server-side checks: strong, but errors appear only after save
2. PROBLEMS / PAINS [PR] + ITS FREQUENCY - Repeated typing of caller details - Mismatched category and subcategory - Close notes missed - Happens on almost every incident	9. PROBLEM ROOT / CAUSE [RC] - No Client Scripts to auto-fill or filter fields - No UI Policies to control mandatory and visible fields by State	7. BEHAVIOR [BE] + ITS INTENSITY - Agents skip optional fields when busy - Rush to close incidents - Stronger during P1 and peak hours
3. TRIGGERS TO ACT [TR] - New incident is raised - State changes to On Hold or Resolved - Priority set to P1	10. YOUR SOLUTION [SL] - Client Scripts: auto-populate caller department and location, filter subcategory by category, alert for P1. - UI Policies: close code and close notes mandatory on Resolved or Closed; On hold reason visible and mandatory only when State is On Hold.	8. CHANNELS OF BEHAVIOR [CH] ONLINE ServiceNow Incident form in the browser
4. EMOTIONS [EM] BEFORE / AFTER - Before: frustrated, worried about missing details - After: confident and relieved		OFFLINE Phone calls and walk-ups, where the agent collects details before entering them
