Team ID	SWTID-2026-7108
Project Title	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to improve incident handling in ServiceNow using Client Scripts and UI Policies, boosting efficiency and data accuracy. It tackles manual data entry and incomplete incident records, promising better operations and happier users. Key features include auto-populated fields and rule-based mandatory fields.

Project Overview	
Objective	The primary objective is to improve the incident logging process in ServiceNow by implementing Client Scripts and UI Policies, ensuring faster and more accurate incident records.
Scope	The project covers the Incident form. It adds Client Scripts and UI Policies that auto-populate fields, filter choices, show alerts and control which fields are mandatory or visible.
Problem Statement	
Description	Manual entry of caller details, mismatched category and subcategory values, and missing close information make incident records slow to create and incomplete.
Impact	Solving these issues will result in faster incident logging, fewer reopened incidents, and more reliable data, contributing to user satisfaction and better service desk operations.
Proposed Solution	
Approach	Using Client Scripts for dynamic form behaviour and UI Policies for field rules, so the Incident form guides the agent while the incident is being logged and closed.
Key Features	- onChange Client Scripts to auto-populate caller department and location, and to filter subcategory by category. - UI Policies to make close code and close notes mandatory on Resolved or Closed, and to show On hold reason only when State is On Hold. - Alert message when the priority is set to Critical (P1).

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop, 4-core CPU (no GPU needed)
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Platform and scripting	ServiceNow (Client Scripts, UI Policies), JavaScript
Libraries	Additional libraries	GlideForm (g_form), GlideUser (g_user), GlideAjax
Development Environment	IDE	ServiceNow Personal Developer Instance, Script Debugger, Chrome browser
Data		
Data	Source, size, format	Sample incident records created in the PDI, 25, table records
