

Solution Architecture

Date	29 September 2026
Team ID	SWTID-2026-7108
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Incident form where the service desk agent enters data. Client Scripts and UI Policies run here to auto-fill, filter, validate and control fields.	ServiceNow Incident Form, Client Scripts (JavaScript), UI Policies
API Gateway	Carries requests between the form and the server, such as caller lookups made by a client script and saving the incident.	ServiceNow web server and load balancer, GlideAjax, REST API
Application Services	Handles login and access, and the server-side logic that supports the form: caller data lookup and server-side validation as a safety net.	Roles and ACLs, Business Rules, Script Includes, GlideRecord
Database	Stores the incident records and the user, location and department data used to auto-populate the form.	ServiceNow Database (Incident, sys_user, Location, Department tables)
